

What worked well?

Communication between team members was good after we tried in using different communication platforms. Splitting task went smoothly as we gave tasks based in each other's strength. We had many meetings, and everyone attended our meetings on time as planned. The documentations were completed in detail. The team dynamic as we resolved issues, we're excellent. Kudos to Muhammad for explaining the majority of the code and helping the team understand and learn from his strengths. Duncan was excellent in organising meetings and the documents that was prepared by all team members.

What could be improved?

We made many assumptions regarding our goals that are not possible to achieve such as learning and understanding react in a couple of hours. We could have also formed the group in an earlier stage so we would have more time working on the assignment. Our backend code should be worked on more as we could not finish it in time for sprint 1.

What will we commit to doing in the next sprint?

Spend more time researching and learning the new technology that we need to finish the project. Communicate regarding issues we will be facing. Spread our time so we wouldn't have timing issues. Have more scrum meetings to discuss pros and cons. Work on our second API in the front end. Work on our backend code and merge it together with our front end.
